EX PARTE OR LATE FILED

Mr. William F. Caton Secretary Federal Communications Commission 1919 M Street, N.W. Washington, D.C. 20554

Re: Notification of Permitted Ex Parte Presentation

MM Docket No. 92-266

Dear Mr. Caton:

Star Cable Associates. by its attorney and nursuant to

100 Greentree Commons 381 Mansfield Avenue Pittsburgh, PA 15220 Telephone (412) 937-0099 Telefax (412) 937-0145

OUR COMPANY

- * Star Cable Associates is a small, rural cable system operator serving a total of 162 community units in South Carolina, North Carolina, Louisiana, Virginia, Texas and Ohio.
- * Star Cable serves a total of 61,000 customers from 60 headends, thus averaging just over 1,000 customers per headend.
- * Since 1987, Star Cable has constructed over 2,500 miles of cable plant in areas with an average density of just 22 homes per mile -- communities which neighboring cable operators had declined to serve even after rate deregulation under the 1984 Cable Act because of the daunting economics of building low-density systems.

OUR PURPOSE

* Rather than just complaining about the impending rate regulations, Star Cable would like to respond to the Commission's public call for constructive suggestions to tailor its benchmark/price cap mechanism in a way that reasonably reduces the administrative burden and disproportionate impact of regulation on small and more rural cable systems.

OUR PROPOSAL

* Cable operators serving communities with densities significantly below average should be allowed an add-on to their benchmark/price cap-generated rate to offset at least in part the greater investment and expense per subscriber of serving low-density communities.

THE RESULT

- * Cable operators would be better able to cover the disproportionate cost of serving rural America without having to pursue cost-of-service proceedings neither they nor the Commission (or local regulators) can much afford.
- * At the same time, only a small percentage of cable subscribers nationwide would see even the moderate adjustment to benchmark rates contemplated by this proposal.

DENSITY DRIVES CABLE ECONOMICS

The most significant factor in cable system economics is density. At very low densities of 30 homes per mile or less, there is a large increase in capital investment per customer and certain plant expenses per customer. Some of the more significant density variables are as follows:

Initial Capital Investment

Distribution System

The cost to build a mile of cable plant varies little from rural to suburban areas. This is by far the largest portion of a system's capital investment (over 75% in a rural system). There is a direct relationship between density and cost per customer. If one system is half as dense as another, the distribution investment per customer doubles.

Head-end Investment

In the typical scenario attached, the rural operator needs nine head-ends to serve the same number of customers a suburban operator services from one head-end. At a cost of over \$100,000 each, the cost differential per customer is substantial.

- Technical Expenses That Are Driven By Plant Miles.
 - Pole Rent, Property Taxes and System Powering Expense

These expenses are relatively constant on a per mile basis, no matter how many customers are in that mile. The cost per customer rises as density decreases.

• Technical Personnel and Related Expenses

While customer levels are a major factor in determining technical staffing levels, in rural areas additional technicians are needed due to travel times and the need to maintain more plant miles. A practical limit is 100 plant miles per technician.

IMPACT OF LOW DENSITY ON CAPITAL INVESTMENT AND EXPENSES

	Rural Density System (22 HPM)	Large Operator Urban Density System (67 HPM)	•
Casa lavastanasti	(000)	(000)	Comments
Gross Investment: Distribution System	\$10,470	\$3,225	Three times as many plant miles in a rural system (\$15,000/mile).
Head-end	1,100	123	Nine head-ends vs. one.
Vehicles	155	135	One less technical vehicle.
Other	<u>1.805</u>	<u>1.805</u>	
Total	\$ <u>13.530</u>	\$ <u>5,288</u>	Capital investment is 2.5 times as high in a rural area.
Investment/Customer	\$ <u>1,458</u>	\$ <u>570</u>	
Expenses: Payroll	\$ 460	\$ 468	The rural requirement for an extra technician but is offset by 10-20% higher wages in urban areas.
Plant	477	206	More rural plant miles mean higher costs for system power, pole rent and property taxes.
Service	933	877	Significantly lower programming costs for large operator. Copyright increases in suburban system due to larger head-end size.
G & A	149	138	Office rent is 72% higher in suburban areas but long distance telephone charges are much lower.
Marketing	<u>26</u>	<u> 26</u>	
Subtotal	\$ 2,045	\$1,715	This is a 19.2% differential in operating expenses for rural systems.
Depreciation	1.278	<u>588</u>	Based on investment differences shown above. Detail is attached.
Total	\$ <u>3,323</u>	\$ <u>2,303</u>	This is a 44% differential in total expenses for rural systems.

NOTE: This is a summary comparison of our rural Ohio system at 22 homes per mile vs. a more suburban system with the national sverage density of 67 homes per mile. Both systems have the same number of customers (9,279 at year-end).

IMPACT OF DENSITY ON CABLE PLANT DEPRECIATION (PER BASIC CUSTOMER)

⁽²⁾Conservatively estimated using no intangibles, no income taxes and an 11.25% return on net assets.

STAR CABLE ASSOCIATES

FCC PRESENTATION SUPPORTING MATERIALS

JULY 30, 1993

OUR COMPANY

- * Star Cable Associates is a small, rural cable system operator serving a total of 162 community units in South Carolina, North Carolina, Louisiana, Virginia, Texas and Ohio.
- * Star Cable serves a total of 61,000 customers from 60 headends, thus averaging just over 1,000 customers per headend.
- * Since 1987, Star Cable has constructed over 2,500 miles of cable plant in areas with an average density of just 22 homes per mile -- communities which neighboring cable operators had declined to serve even after rate deregulation under the 1984 Cable Act because of the daunting economics of building low-density systems.

OUR PURPOSE

* Rather than just complaining about the impending rate regulations, Star Cable would like to respond to the Commission's public call for constructive suggestions to tailor its benchmark/price cap mechanism in a way that reasonably reduces the administrative burden and disproportionate impact of regulation on small and more rural cable systems.

OUR PROPOSAL

* Cable operators serving communities with densities significantly below average should be allowed an add-on to their benchmark/price cap-generated rate to offset at least in part the greater investment and expense per subscriber of serving low-density communities.

THE RESULT

- * Cable operators would be better able to cover the disproportionate cost of serving rural America without having to pursue cost-of-service proceedings neither they nor the Commission (or local regulators) can much afford.
- * At the same time, only a small percentage of cable subscribers nationwide (and major MSO systems nationwide) would see even the moderate adjustment to benchmark rates contemplated by this proposal.

DENSITY DRIVES CABLE ECONOMICS

The most significant factor in cable system economics is density. At very low densities of 30 homes per mile or less, there is a large increase in capital investment per customer and certain plant expenses per customer. Some of the more significant density variables are as follows:

Initial Capital Investment

Distribution System

The cost to build a mile of cable plant varies little from rural to suburban areas. This is by far the largest portion of a system's capital investment (over 75% in a rural system). There is a direct relationship between density and cost per customer. If one system is half as dense as another, the distribution investment per customer doubles.

Head-end Investment

In the typical scenario attached, the rural operator needs nine headends to serve the same number of customers a suburban operator services from one head-end. At a cost of over \$100,000 each, the cost differential per customer is substantial.

- Technical Expenses That Are Driven By Plant Miles.
 - Pole Rent, Property Taxes and System Powering Expense

These expenses are relatively constant on a per mile basis, no matter how many customers are in that mile. The cost per customer rises as density decreases.

Technical Personnel and Related Expenses

While customer levels are a major factor in determining technical staffing levels, in rural areas additional technicians are needed due to travel times and the need to maintain more plant miles. A practical limit is 100 plant miles per technician.
